# **Database Design**

## **#1 Project Intent**

For this project, I'd like to design a database system for anime. Anime is a style of Japanese film and animation. I enjoy watch a lot of anime and thought it would be useful to create a database that contained information about all the different anime that exist. This system is a conceptualization of an Anime database that is inspired from several sites: myanmilelist.net which contains information about anime, crunchyroll.com an anime streaming site, and animecharacetdatabase.com which has a database of many characters from anime.

The goal of this system would be to merge elements from these three different websites to create an adequate database for Anime. For this database system, I'd like to make it easy to find anime based on different genre a user enjoys, and lists all the details of that anime in a list with things such as genre type, setting, characters, release date, etc. I think it would be a fun and useful project for anime fans. They could input data about an anime, and the database system can organize it well. A list of the entities can be: Anime, Manga, Genre, Studio Character, Creator, and User.

The scope of this project is to create a database that contains information of the entities previously listed. User will also be able to create accounts and have a list of anime that they enjoy. The system could possibly be self-sustainable since users will be able to input anime data if it does not already exist in the database. In this report I will design a relational database and implement it in SQL Oracle. There will be several figures of diagrams, sample data forms, and prototypes of better forms for a more reliable database system.

## #2 Sample Forms

### Crunchyroll Sign Up/Log in Forms

The image shows a screenshot of the Crunchyroll website's user interface, specifically the Sign Up and Log In sections. The Sign Up section is titled "Sign Up for a Free Account" and includes a subtext "Please join Crunchyroll!! It's only one click away!". It features input fields for Email Address, User Name, Password, and Birthday (with dropdowns for Month, Day, and Year). There are also radio buttons for Gender (Female, Male, Other) and a checkbox for "Yes, keep me posted on updates related to Crunchyroll.". A large orange "Create Account" button is at the bottom. The Log In section is titled "Log In" and includes a subtext "Already have an account? Log in below.". It features input fields for Email or User Name and Password, with a "Forgot password?" link next to the Password field. A large orange "Log In" button is at the bottom. At the very bottom of the page, there is a copyright notice: "© 2006-2019 Ellation, Inc."

These two forms are used for user purposes, either to create a new account or log into an existing account. The Sign Up form asks for a number of things like email address, username, password, date of birth, gender, and crunchyroll updates. These will be filled out by the user and put into a database. The variables that would be in this table would be as follows:

- USERNAME PRIMARY KEY NOT NULL
- EMAIL ADDRESS VARCHAR(30) NOT NULL
- PASSWORD VARCHAR(30) NOT NULL
- BIRTHDAY DATE NOT NULL
- GENDER NOT NULL

The Log In Form asks for the username/email and password. When a user enters this data, the database will be checked for the account and log them into the website.

## Animecharactersdatabase Add New Series Form

---

<b>(required) English Title</b>	<input type="text"/>
<b>Romaji Title</b>	<input type="text"/>
	( Please remove all ūōtēā )
<b>Furigana</b>	<input type="text"/>
<b>Japanese Title</b>	<input type="text"/>
<b>Release Date</b>	<input type="text"/>
<b>Japanese Studio</b>	<input type="text"/>
<b>English Studio</b>	<input type="text"/>
<b>Media Type</b>	<input type="text" value="---"/>
<b>Content Rating</b>	<input type="text"/>
<b>Indexing Progress</b>	<input type="text" value="0 -"/>
<b>(required) Home Page</b>	<input type="text"/>
	<input type="button" value="Post"/>

---

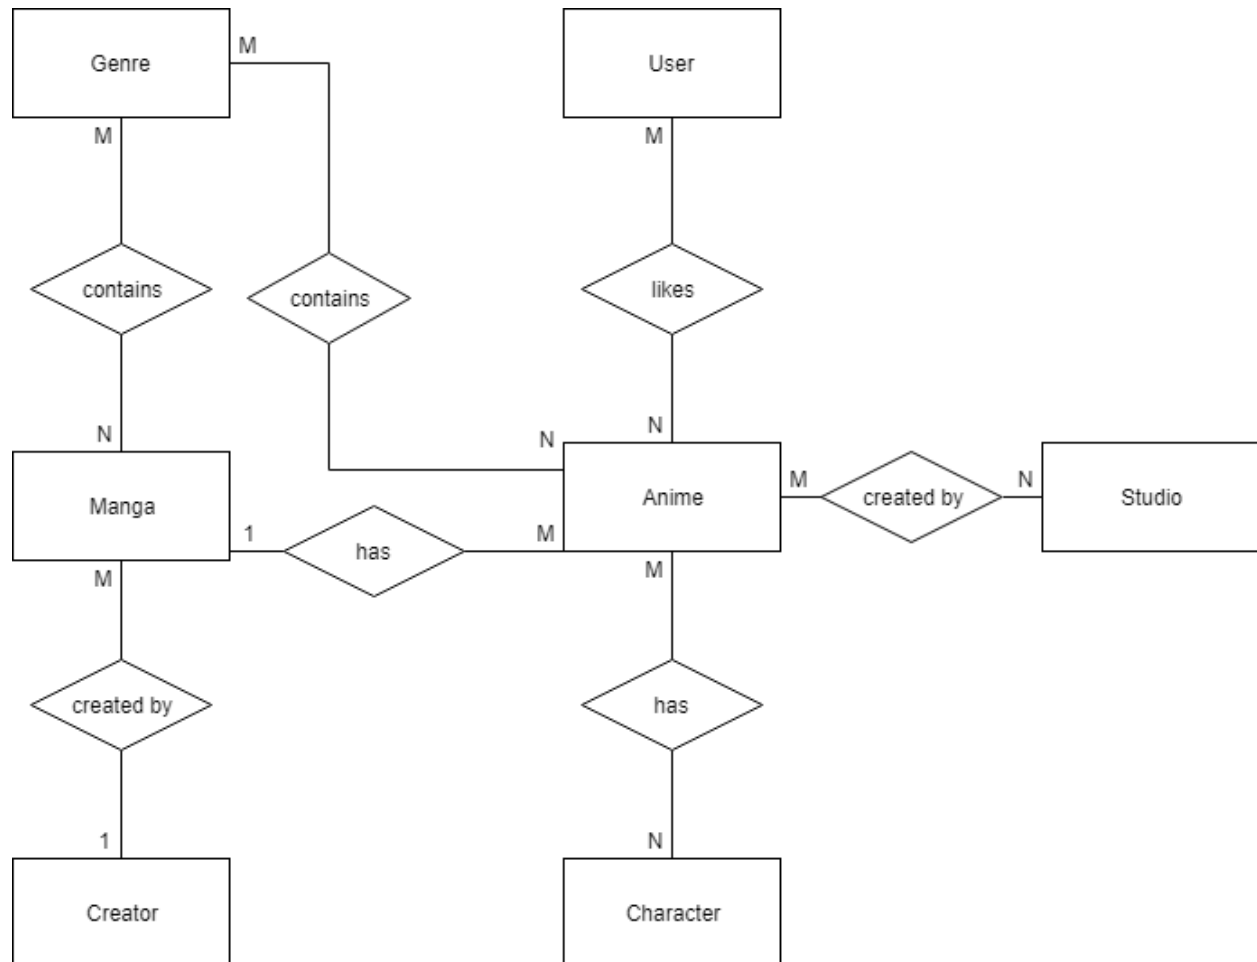

This form is used to add a new series into the already existing database of Anime. It asks for many of the attributes of the Anime entity such as its title, release date, content rating, media type, etc. The purpose of this form is to allow users to add a new series to the website and makes it self-sustainable as long as website traffic is existent.

### #3 Conceptual ER model

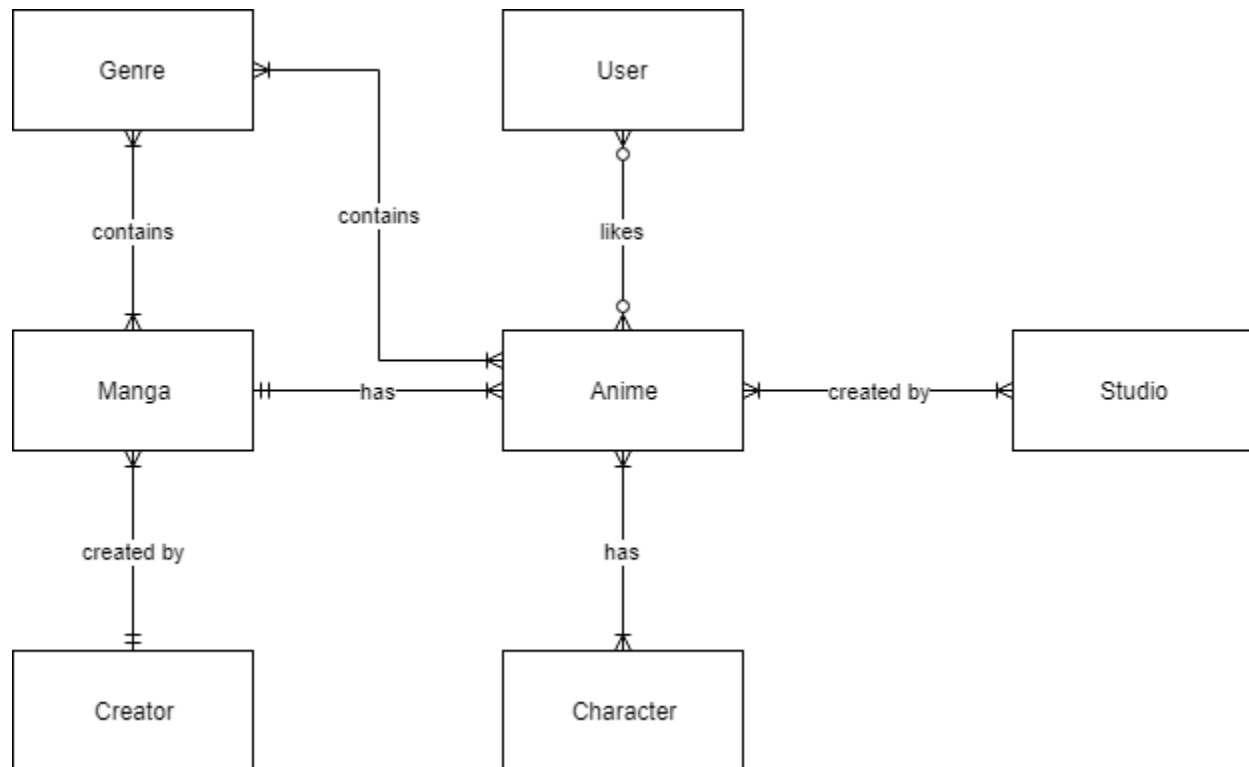

#### List of Entities

- Anime – the name of the anime and its attributes
- Manga – graphic novels that are usually adapted into anime
- Studio – the company or studio that creates and releases anime adaptations
- Genre – all the different genre types
- Character – characters in anime
- Creator – creators of anime
- User – anime fan account

#### Chen's notation model diagram

**IE Crow Foot data model diagram (*without attributes*)**

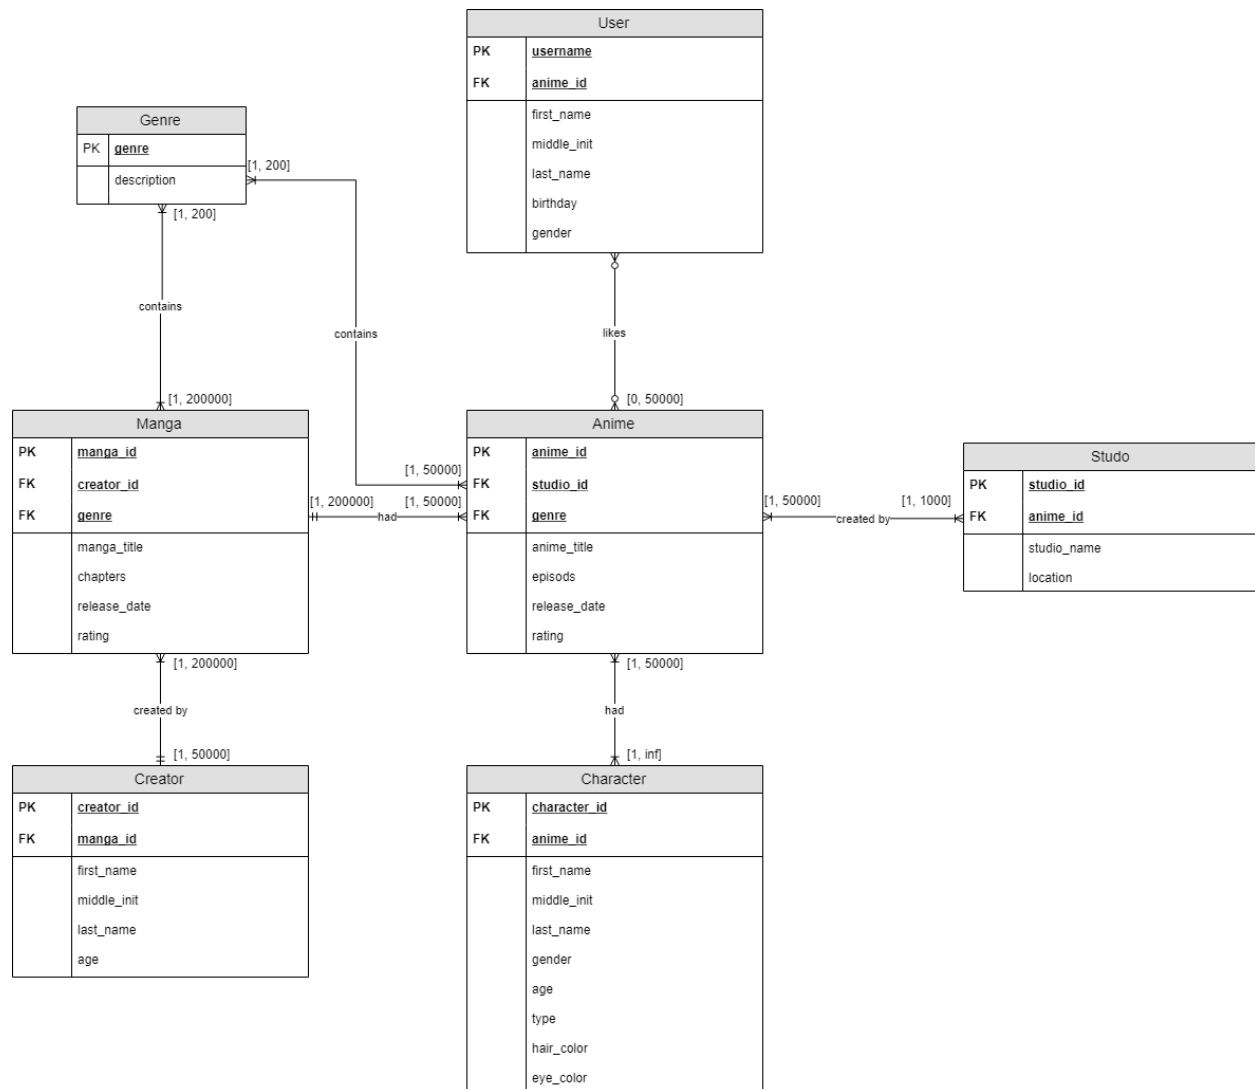

#### **#4 Preliminary E-R logical data model**

##### **List of Entities**

- Anime – the name of the anime and its attributes
  - AnimeID – used to uniquely identify; a105
  - AnimeTitle – the title of the anime; Steins;Gate
  - Episodes – how many episodes there are in the anime; 34
  - ReleaseDate – when the anime was first aired on TV; April 6, 2011
  - Rating – rating from 1-10 calculated based on what all the users have rated it; 7
  - Genres – what type of genres it contains; thriller, sci-fi
  - Studio – the studio that created the anime; White Fox
  
- Manga – graphic novels that are usually adapted into anime
  - MangaID – used to uniquely identify; m207
  - MangaTitle – the title of the manga; Bleach
  - Chapters – how many chapters there are in the manga; 765
  - ReleaseDate – when the first chapter was released; August 7, 2011
  - Rating – rating 1-10 from users; 8
  - Genres – type of genres it contains; adventure, supernatural
  - Creator – the creator of the manga; Tite Kubo
  
- Studio – the company or studio that creates and releases anime adaptations
  - StudioID – used to uniquely identify; s65
  - StudioName – the name of the studio; Toei Animation
  - Anime – the anime that the studio has created; One Piece, Dragon Ball Super, etc
  - Location – where the studio is based at; headquarters; Japan
  
- Genre – all the different genre types
  - Genre – thriller, action, sci fi
  - Description – scary, suspenseful, action-packed

- Character – characters in anime
  - CharacterID – used to uniquely identify; c1025
  - FirstName – first name of character; Ichigo
  - MiddleInit – middle initial of character if applicable; m, null
  - LastName – last name of character; Kurosaki
  - Gender – gender of character; male, female
  - Age – how old the character is; 17
  - Type – human, cat, dog, fox, demon, etc
  - HairColor – color of hair; orange
  - EyeColor – color of eyes; orange
  
- Creator – creators of anime
  - CreatorID - – used to uniquely identify
  - FirstName; Tite
  - MiddleInit; H
  - LastName; Kubo
  - Age; 41
  - Manga; Bleach
  
- User – anime fan account
  - Username J– used to uniquely identify; animefan123
  - FirstName - John
  - MiddleInit - K
  - LastName - Fisher
  - Birthday – March 3, 2000
  - Gender - Male

## Preliminary IE Crow Foot data model diagram (*with attributes*)

Many Anime can be created by many Studios.

Each Studio makes many Anime.

Each Manga has at least 1 creator.

Each Manga has at least 1 Anime.

Each Anime has at least 1 Anime.

Each Creator can many Manga.

Each User can like zero or many Anime.

Keith Lopez

Each Anime can be liked by zero or many Users.

Many Anime can have many Characters.

Anime contains atleast 1 Genre.

Manga contains at least 1 Genre.

# Slides

# Anime Database Design & Implementation

Faye Lopez

## Project Intent

## A new database for Anime

- ▶ Anime is a style of Japanese film and Animation

## Merging Three Websites

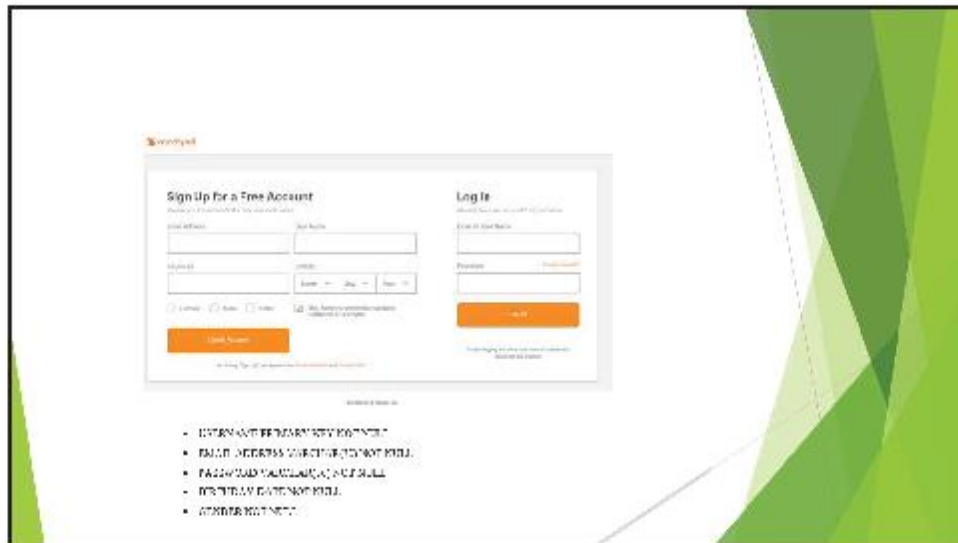

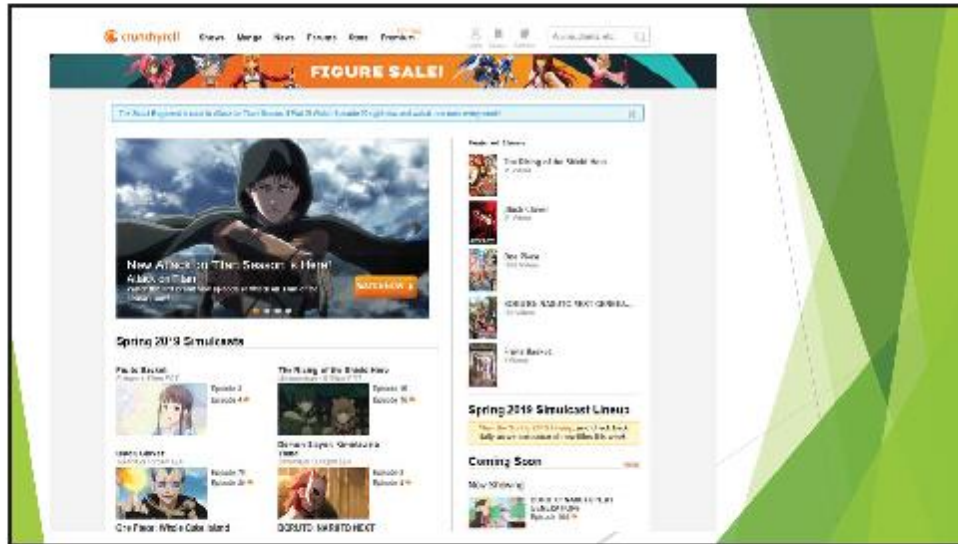

- ▶ [crunchyroll.com](http://crunchyroll.com)
- ▶ [myanimelist.net](http://myanimelist.net)
- ▶ [anidb.net](http://anidb.net)

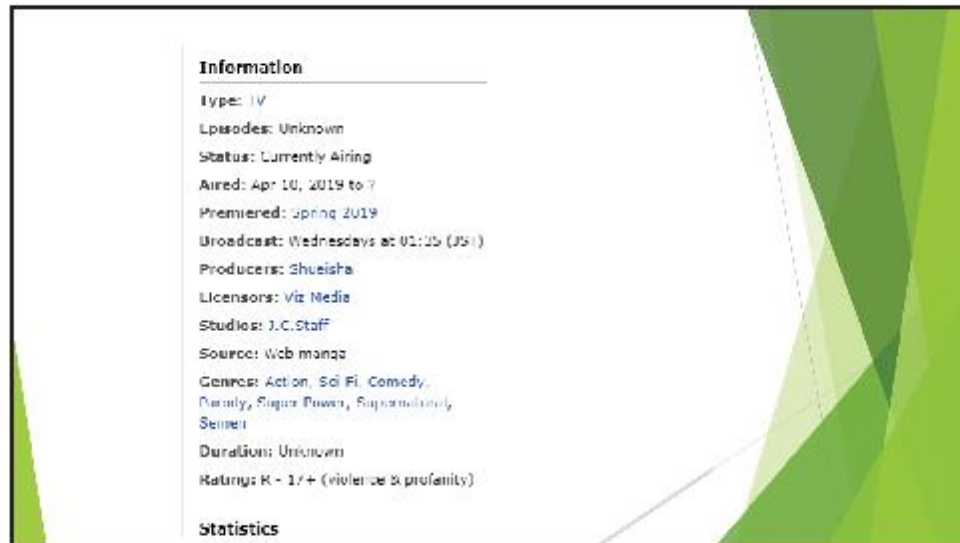

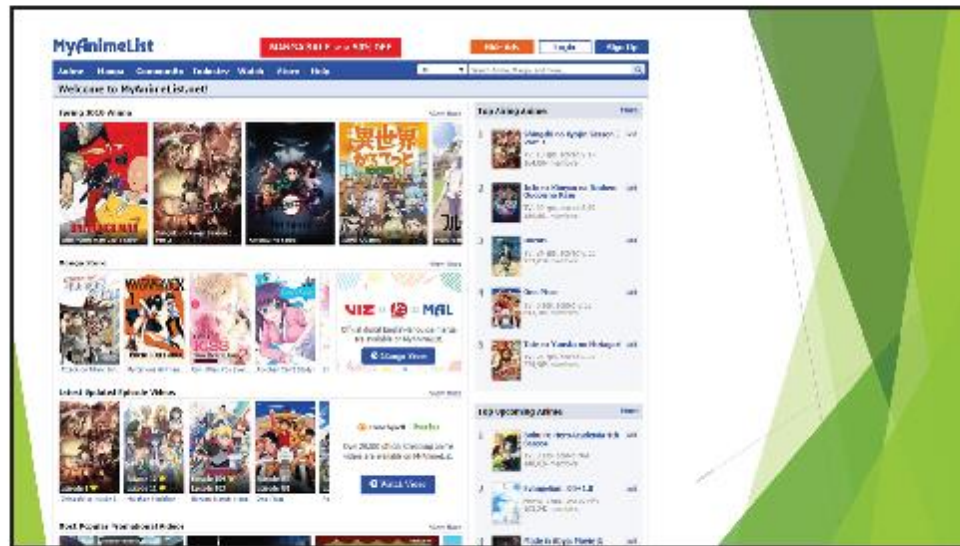

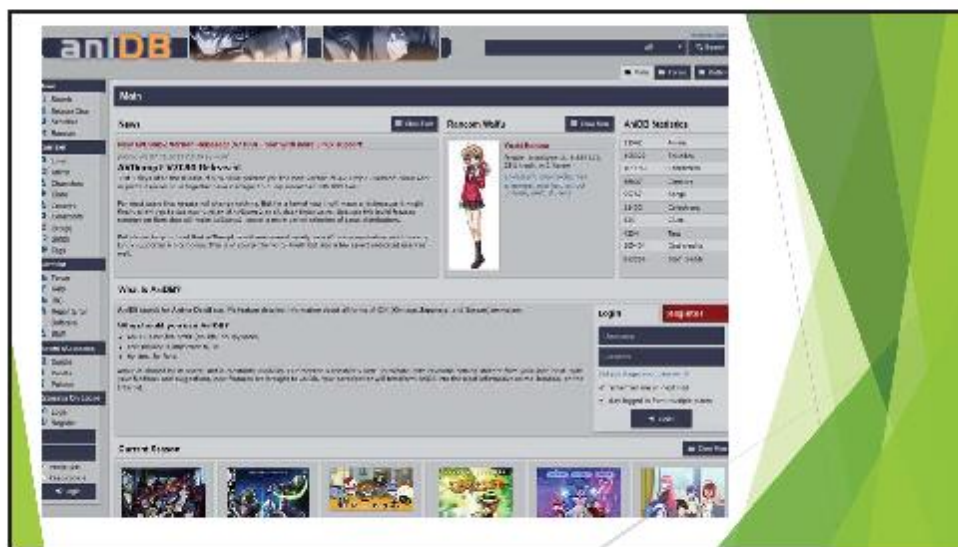

crunchyroll

4/28/2019

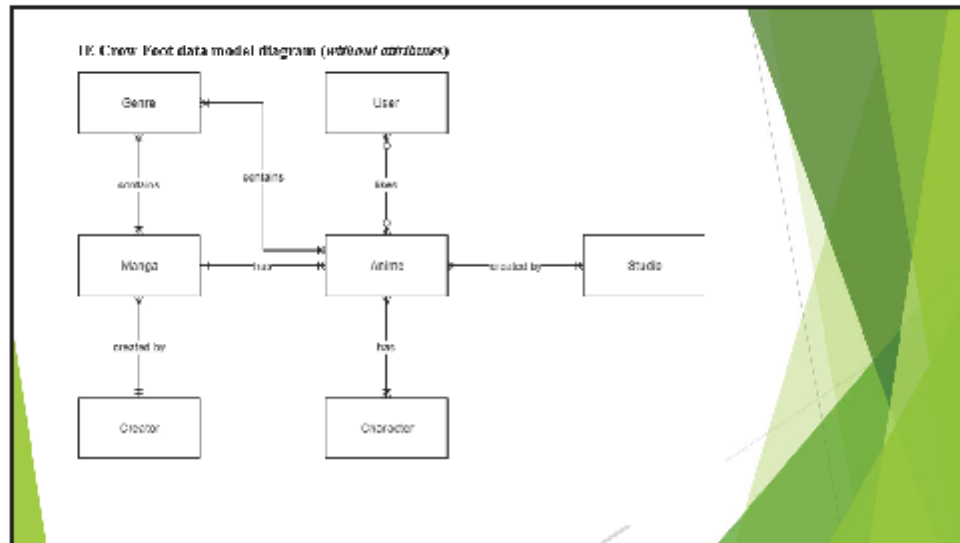

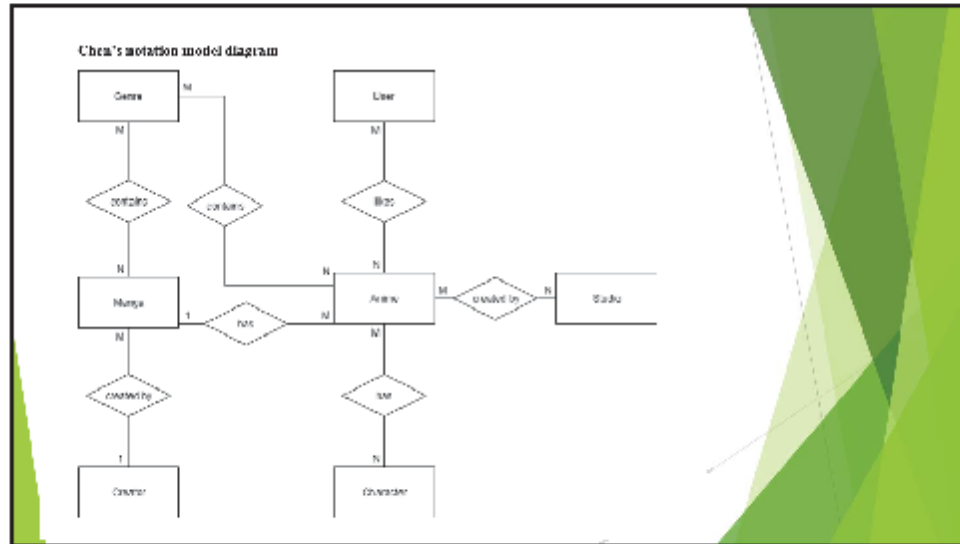

## Scope

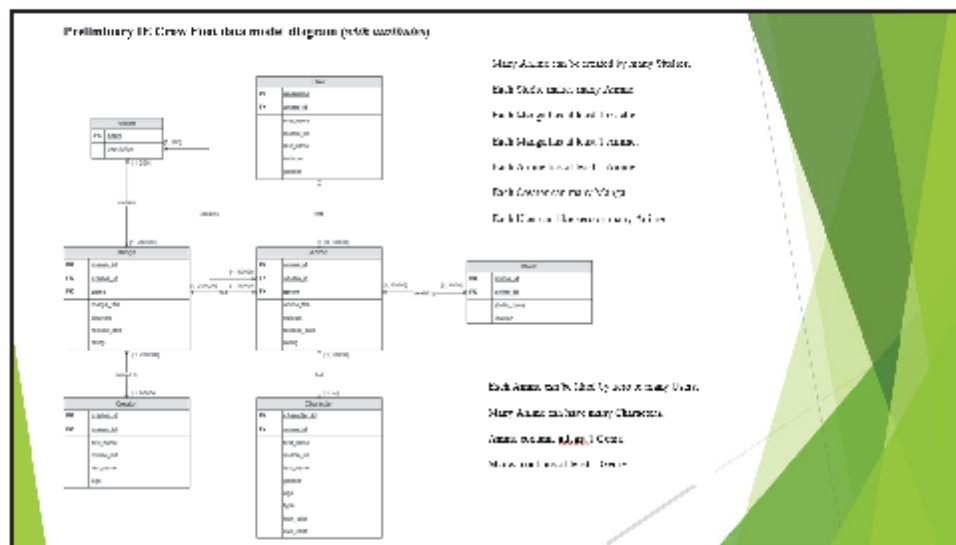

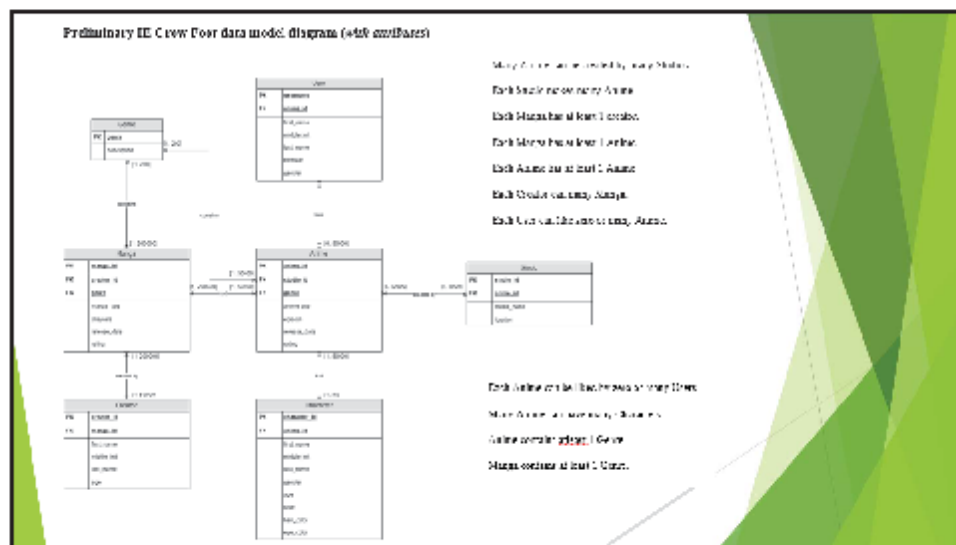

- ▶ Create a database of Anime.
- ▶ Relation database design and implementation.
  - ▶ Diagrams, sample data forms, prototypes
- ▶ More reliable and gets best parts from each website.
- ▶ Self-Sustainable.

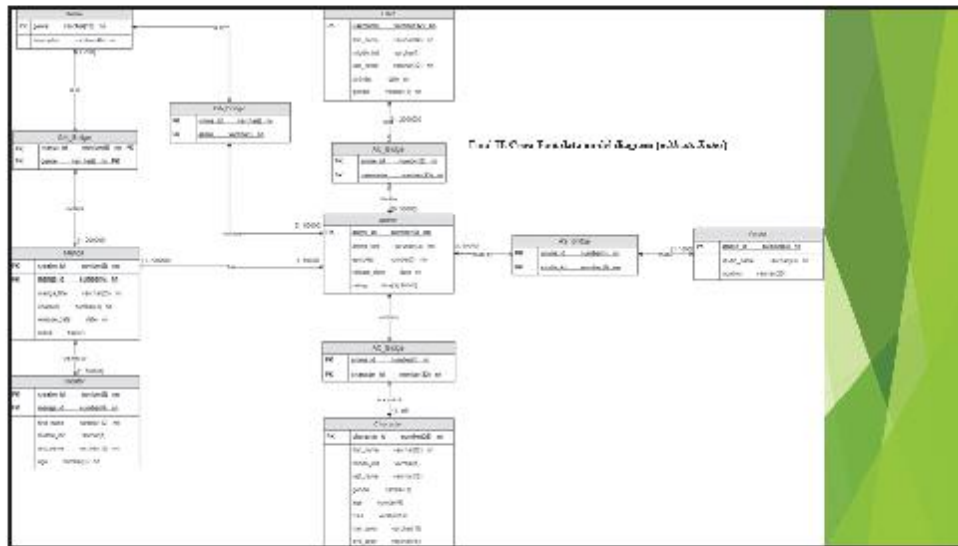

## Entities

- ▶ Anime - the name of the anime and its attributes
- ▶ Manga - graphic novels that are usually adapted into anime
- ▶ Studio - the company or studio that creates and releases anime adaptations
- ▶ Genre - all the different genre types
- ▶ Character - characters in anime
- ▶ Creator - creators of anime
- ▶ User - anime fan account

### Add Anime

Title: \_\_\_\_\_
