

# Unit I||Project

Faye Lopez

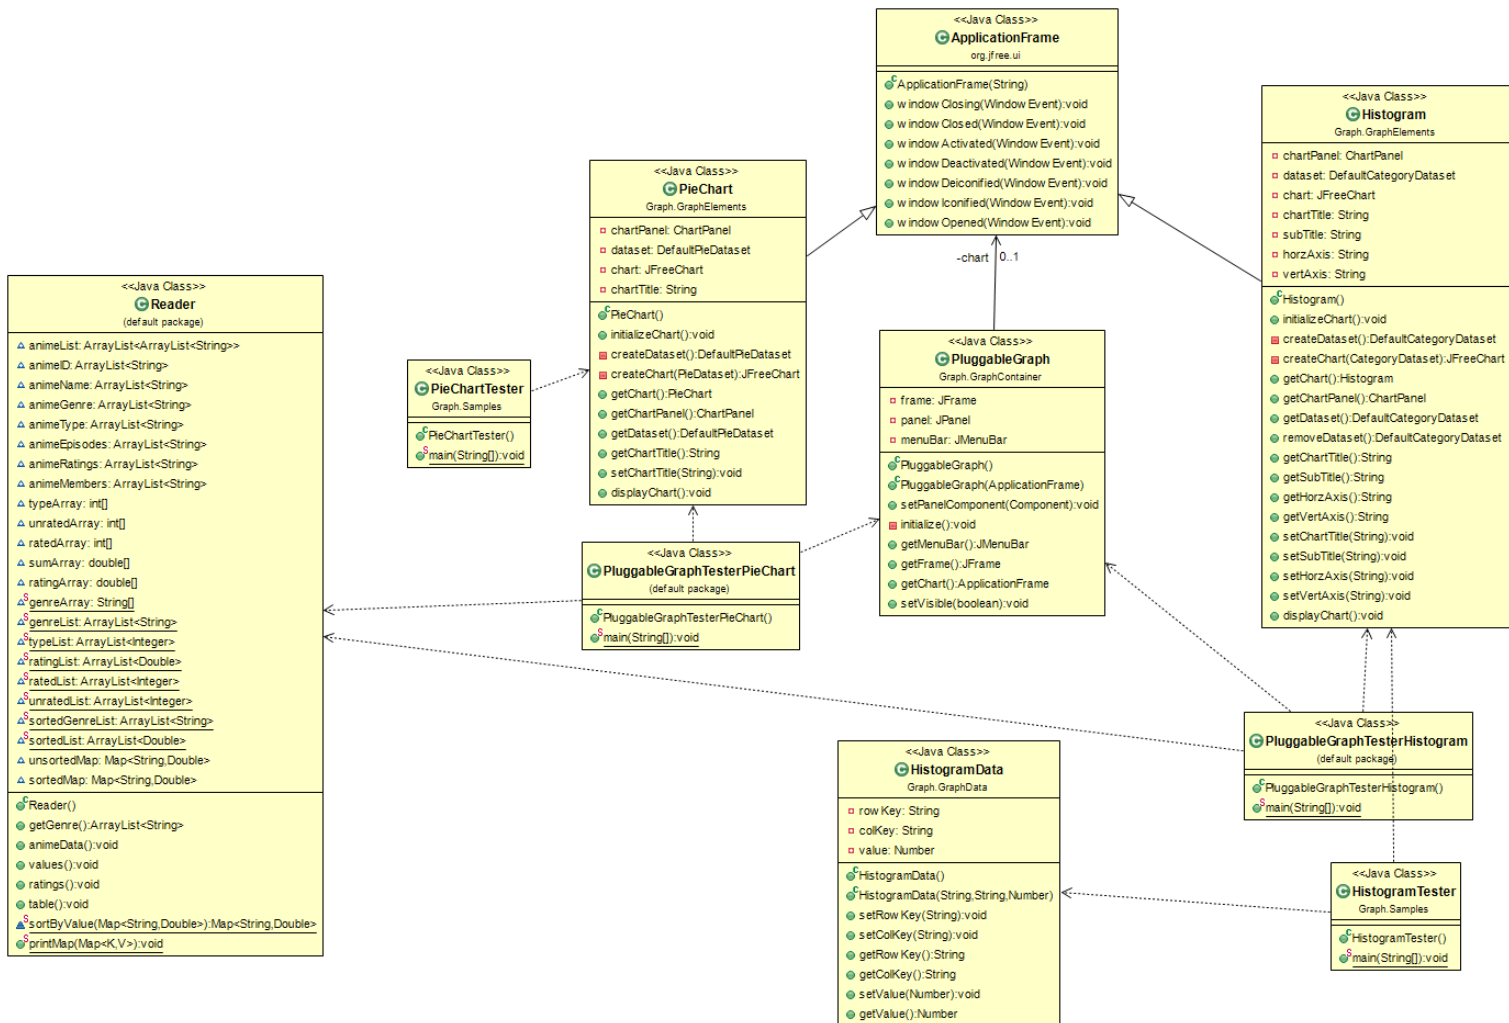

## Pseudocode

```
for i: to array length:i++  
    double ratenumber:=0  
    If (ratings is empty AND genre(i) contains genre(j))  
        ratenumber := 0  
        unratedArray[j] := unratedarray +1  
    else if( genre(i) contains genre(j))  
        ratenumber := ratings(i);  
        ratedArray[j] +=1
```

For loop in Reader.java under ratings() method

- The loops gets the total number of times each genre was rated and how many times it was not rated.

# Hypothesis

## What is the most popular genre in anime?

The anime.txt dataset contains data about:

- Anime ID Number
- Anime Title
- Anime Genre
- Anime Type
- Anime Episodes
- Anime Rating
- Anime Members

I took all of this data and separated each anime by Genre. The following information resulted.

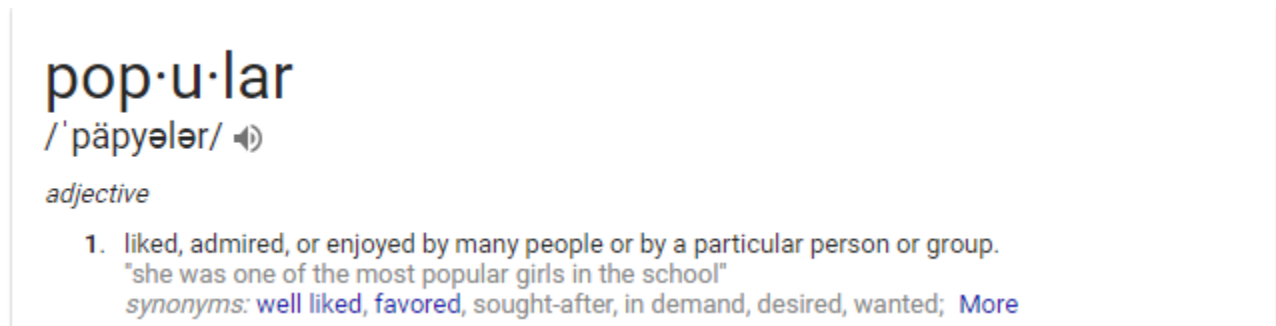

- **Total Anime:** 34557
  - **Total number of genres:** 40
  - **Genre containing most Anime:**
    - Comedy (4645)
      - **Rating:** 6.62
      - Rated 4575 times.
      - Unrated 70 times.
  - **Genre containing least Anime:**
    - Yaoi (39)
      - **Rating:** 6.43
      - Rated 38 times.
      - Unrated 1 times.
  - **Highest rated genre:**
    - Josei (54)
      - **Rating:** 7.44
      - Rated 52 times.
      - Unrated 2 times.
  - **Lowest rated genre:**
    - Dementia (240)
      - **Rating:** 5.01
      - Rated 238 times.
      - Unrated 2 times.

With this information we can see that the **most popular** genre in anime is **Comedy** according to *absolute* data. It is the genre that contains the most Anime along as the most ratings.

**Yaoi** has the **least** Anime.

However, if we consider *relative* data, we can see that the genre **Josei** has the **highest** rating ranking out of all the other genres.

**Dementai** has the **lowest** rating.

**Conclusion:** Comedy is the most popular genre in anime since it is the genre with that has the most amount Anime and a relatively high rating of 6.62 among 4575 ratings.
